EXPERIENCE

HashedIn By Deloitte

Bengaluru, Karnataka

DevOps Engineer - I

Dec 2024 – Present

JPMorgan Chase (JPMC) – Mainframe modernization

- Provision and manage AWS infrastructure for internal application teams using **Terraform**, supporting services including **RDS, ECS, S3, SNS, SQS, Lambda, and Route 53**; troubleshoot infrastructure, networking, and service-level issues across environments.
- Support **RDS failover testing**, DNS and failover configuration through **Route 53**, and **ECS Service Connect** setup; contribute to infrastructure observability and operational troubleshooting.
- Use **Dynatrace, Splunk, and Datadog** for monitoring and troubleshooting; perform SRE-focused infrastructure maintenance including module-pack upgrades, vulnerable package remediation, and controlled upgrades or rollbacks.
- Investigate infrastructure and application issues across cloud environments, collaborating with application teams to identify root causes and restore reliable service operation.
- Work with **Jules, Spinnaker, and Terraform** across infrastructure provisioning, deployment, operational support, and troubleshooting workflows.

Kenvue – Replatform & Lift-and-Shift Migration (Azure & AWS)

- Executed subscription-to-subscription enterprise migration using a **replatform strategy for PaaS** workloads and **lift-and-shift for VMs**; provisioned Azure infrastructure exclusively through **Terraform** in line with governance standards.
- Provisioned and supported Azure services including **Azure Data Factory, Storage Accounts, Azure SQL, PostgreSQL Flexible Server, VMs, Key Vault, Application Gateway, Load Balancers, Redis, Function Apps, Logic Apps, and Cognitive Services**; migrated storage, ADF pipelines, disks, and databases.
- Provisioned AWS workloads using **Terraform** across S3, RDS, ALB, EBS, EFS, Lambda, SNS, SQS, and EventBridge; contributed to governance alignment that resulted in approximately **\$1M–\$1.5M in annual cloud cost savings**.

Kenvue – VMC to AWS Migration (2000+ Servers)

- Contributed to a large-scale **VMware-to-AWS migration** using **AWS Application Migration Service (MGN)** for application and database VMs, following **GxP best practices** with minimal downtime.
- Recreated F5 load-balancing functionality using **AWS ALB/NLB** and supported infrastructure configuration for migrated workloads.
- Automated Linux and Windows VM validation using **Shell scripting and PowerShell**, and automated creation of MGN launch templates to reduce repetitive manual effort.

MPC IAM AMS Migration – On-Premises to Azure

- Migrated an in-house **Identity and Access Management (IAM)** platform from on-premises infrastructure to Azure by provisioning **App Registrations, Key Vaults, RBAC roles, and App Services** using Terraform.
- Integrated Terraform provisioning with **Azure DevOps Pipelines**, built CI/CD pipelines for **.NET applications on Azure App Service**, and assisted developers in securely migrating application secrets to Azure Key Vault.
- Troubleshoot **Azure ExpressRoute connectivity** between cloud and on-premises environments and resolved Terraform state-management and infrastructure provisioning issues.

DevOps Intern

Aug 2024 – Nov 2024

- Built hands-on experience with **Git, Docker, Linux, Shell scripting, Terraform, Kubernetes, CI/CD**, and cloud platforms including **AWS, Azure, and GCP**.
- Worked with Terraform across multiple cloud platforms and gained practical exposure to **Azure DevOps, SRE practices, Kubernetes, and Generative AI**.
- Worked with cloud-native infrastructure and deployment workflows across AWS, Azure, and GCP, strengthening practical experience in infrastructure automation and CI/CD.
- Built **Smart Remedy** from scratch and deployed it on **Amazon EKS**; implemented Prometheus and Grafana monitoring, email-based alerts, and AI-backed remediation guidance for Kubernetes issues.

Magna International

Bengaluru, Karnataka

Intern - ADAS Algorithm Development

Feb 2024 – Jul 2024

- Contributed to an ongoing **Auto Park ADAS feature** involving perception development using ultrasonic sensors.
- Worked as part of the **algorithm development team** on image-processing functionality for ADAS applications.
- Used **C++** for development and integrated the **PotMap** module with another module within the project.

Projects

Kubernetes Autoscaling using KEDA (Kafka Event-Driven Scaling) | *Kubernetes, KEDA, Kafka, Prometheus*

- Implemented event-driven autoscaling of Kafka consumer pods using **KEDA**, dynamically scaling workloads based on Kafka consumer-group lag metrics.
- Configured KEDA ScaledObjects with Kafka triggers, integrated **Prometheus** metrics, and tuned scaling thresholds to improve burst responsiveness while reducing idle resource consumption.
- Validated autoscaling under changing Kafka workloads and refined scaling thresholds using observed lag and resource metrics.

- Agentic AI-Based Vulnerability Remediation System | *Python, Ansible, Microsoft AutoGen, Streamlit, NVD API*
- Designed a **5-agent vulnerability remediation platform** using Microsoft AutoGen with Coordinator, Analyzer, Code Generator, Documentation Generator, and Reviewer agents; built a Streamlit interface for manual, template, and CSV-based CVE submissions.
 - Integrated the **NVD API** to retrieve CVE details and automated generation of **Python and Ansible remediation scripts** for fixable vulnerabilities, along with mitigation guides for non-fixable cases and workflow validation.
 - Structured the workflow so agents analyze vulnerabilities, generate remediation artifacts, document the proposed fix, and review the output before presenting the final result to the user.

Education

JSS Academy of Technical Education

Bachelor of Engineering in Computer Science and Engineering

Bangalore, Karnataka

CGPA: 9.13

2020 – 2024

Technical Skills

Cloud: AWS, Azure, GCP
DevOps & Infrastructure: Terraform, Kubernetes, Docker, Ansible, Git, CI/CD, Azure DevOps, Spinnaker
AWS Services: EC2, RDS, ECS, S3, ALB/NLB, EBS, EFS, Lambda, SNS, SQS, EventBridge, Route 53
Azure Services: App Services, Key Vault, Azure SQL, PostgreSQL Flexible Server, Application Gateway, Azure Data Factory
Monitoring & Observability: Prometheus, Grafana, Dynatrace, Splunk, Datadog
Languages & Scripting: Python, C++, Bash/Shell Scripting, PowerShell

Certifications

- Google Cloud Professional Cloud DevOps Engineer
- Microsoft Azure Fundamentals (AZ-900)
- Claude Certified Architect - Foundations
- Google Certified Partner Specialist - Agent Development
- Python Essentials – Cisco Networking Academy
- DevOps Certification – Udemy
